Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: the specification should not refer to the claims, for the claims could be changed during the examination process.

Appropriate correction is required.

2. The abstract of the disclosure is objected to because the abstract discloses more than one paragraph and should contain no more than 150 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4, 6-10 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Link et al (5,906,837).

Link et al teach a device for producing pressed articles, comprising a pair of exchangeable rotatable punches (2, 3), a stationary die plate (1), a spring member (9) disposed at the stem of the punch and connects the punch to a punch shaft (14, 15), regulating units (17-20) connecting to a controller (21) for controlling the linear movement and the rotational movement of the upper and lower punch units; wherein the device further comprises a serration surface with a tooth profile (col. 5, lines 64-67) connecting with the drive motors (5, 7) and interacting with

the punch circumference; the punches (2, 3) are supported by a soft and resilient bearing to prevents damage to the device during penetration of the punches into the die (col. 3, lines 14-20).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Link et al ('837) as applied to claims 1-4 and 6-12 above, and further in view of Barna (4,487,566).

Link et al fail to disclose a seal between the punch shaft and the punch.

Barna discloses a punching tool having interchangeable punches, comprising a plurality of press units (10), each having an upper and lower punch tool (14, 16) having a punch (54) and a punch shaft (58), a seal member (75) located between the punches and the punch shafts to prevent the material getting into a bearing bore (col. 6, lines 48-51).

It would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to modify Link et al by providing a seal member between the punch and the punch shaft as taught by Barna, because the seal member would prevent the material leaking into the die system; thus, eliminate the contamination during the molding process.

Allowable Subject Matter

7. Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to teach or suggest a rotary press comprises several springs elements lying one behind the other at the external component in the movement direction of the punch and arranged in a comb-like manner.
